

PATENT COOPERATION TREATY

PCT

NOTIFICATION OF ELECTION

(PCT Rule 61.2)

From the INTERNATIONAL BUREAU

To:

Assistant Commissioner for Patents
United States Patent and Trademark
Office
Box PCT
Washington, D.C.20231
ETATS-UNIS D'AMERIQUE

in its capacity as elected Office

Date of mailing (day/month/year)

25 September 2000 (25.09.00)

International application No.

PCT/SE99/02255

Applicant's or agent's file reference

103371901

International filing date (day/month/year)

02 December 1999 (02.12.99)

Priority date (day/month/year)

03 December 1998 (03.12.98)

Applicant

PERSSON, Fredrik et al

1. The designated Office is hereby notified of its election made:

in the demand filed with the International Preliminary Examining Authority on:

30 June 2000 (30.06.00)

in a notice effecting later election filed with the International Bureau on:

2. The election ☒ was

was not

made before the expiration of 19 months from the priority date or, where Rule 32 applies, within the time limit under Rule 32.2(b).

INTERNATIONAL PRELIMINARY EXAMINATION REPORT

(PCT Article 36 and Rule 70)

14

Applicant's or agent's file reference 103371901	FOR FURTHER ACTION See Notification of Transmittal of International Preliminary Examination Report (Form PCT/IPEA/416)	
International application No. PCT/SE99/02255	International filing date (day/month/year) 02-12-1999	Priority date (day/month/year) 03-12-1998
International Patent Classification (IPC) or national classification and IPC ₇ B25J 17/02, F16C 11/06		
Applicant ABB AB et al		

1. This international preliminary examination report has been prepared by this International Preliminary Examining Authority and is transmitted to the applicant according to Article 36.

2. This REPORT consists of a total of 3 sheets, including this cover sheet.

☒ This report is also accompanied by ANNEXES, i.e., sheets of the description, claims and/or drawings which have been amended and are the basis for this report and/or sheets containing rectifications made before this Authority (see Rule 70.16 and Section 607 of the Administrative Instructions under the PCT).

These annexes consist of a total of 2 sheets.

3. This report contains indications relating to the following items:

- I ☒ Basis of the report
- II ☐ Priority
- III ☐ Non-establishment of opinion with regard to novelty, inventive step and industrial applicability
- IV ☐ Lack of unity of invention
- V ☒ Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement
- VI ☐ Certain documents cited
- VII ☐ Certain defects in the international application
- VIII ☐ Certain observations on the international application

Date of submission of the demand 30-06-2000	Date of completion of this report 05-03-2001
Name and mailing address of the IPEA/SE Patent- och registreringsverket Box 5055 S-102 42 STOCKHOLM Facsimile No. 08-667 72 88	Authorized officer Ender Dag /itw Telephone No. 08-782 25 00

I. Basis of the report**1. With regard to the elements of the international application:***

- ☐ the international application as originally filed
- ☒ the description:
pages 1-3, as originally filed
pages _____, filed with the demand
pages _____, filed with the letter of _____
- ☒ the claims:
pages _____, as originally filed
pages _____, as amended (together with any statement) under article 19
pages _____, filed with the demand
pages 1-2, filed with the letter of 2000-12-13
- ☒ the drawings:
pages 1-5, as originally filed
pages _____, filed with the demand
pages _____, filed with the letter of _____
- ☐ the sequence listing part of the description:
pages _____, as originally filed
pages _____, filed with the demand
pages _____, filed with the letter of _____

2. With regard to the language, all the elements marked above were available or furnished to this Authority in the language in which the international application was filed, unless otherwise indicated under this item.

These elements were available or furnished to this Authority in the following language ENGLISH which is:

- ☐ the language of a translation furnished for the purposes of international search (under Rule 23.1(b)).
- ☒ the language of publication of the international application (under Rule 48.3(b)).
- ☐ the language of the translation furnished for the purposes of international preliminary examination (under Rules 55.2 and/or 55.3).

3. With regard to any nucleotide and/or amino acid sequence disclosed in the international application, the international preliminary examination was carried out on the basis of the sequence listing:

- ☐ contained in the international application in written form.
- ☐ filed together with the international application in computer readable form.
- ☐ furnished subsequently to this Authority in written form.
- ☐ furnished subsequently to this Authority in computer readable form.
- ☐ The statement that the subsequently furnished written sequence listing does not go beyond the disclosure in the international application as filed has been furnished.
- ☐ The statement that the information recorded in computer readable form is identical to the written sequence listing has been furnished.

4. ☐ The amendments have resulted in the cancellation of:

- ☐ the description, pages _____
- ☐ the claims, Nos. _____
- ☐ the drawings, sheet/fig _____

5. ☐ This report has been established as if (some of) the amendments had not been made, since they have been considered to go beyond the disclosure as filed, as indicated in the Supplemental Box (Rule 70.2 (c)).**

* Replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are annexed to this report since they do not contain amendments (Rules 70.16 and 70.17).

** Any replacement sheet containing such amendments must be referred to under item 1 and annexed to this report.

INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No.

PCT/SE99/02255

V. Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N)	Claims	<u>1-11</u>	YES
	Claims		NO
Inventive step (IS)	Claims	<u>1-11</u>	YES
	Claims		NO
Industrial applicability (IA)	Claims	<u>1-11</u>	YES
	Claims		NO

2. Citations and explanations (Rule 70.7)

The invention relates to a robot including a device for eliminating play in a three axle-joint. According to the invention the device comprises an annular bearing fixed tightly in a housing in the joint socket. The housing has a grooved surface designed to increase friction on the abutting bearing by permanent deformation of the bearing.

Documents cited in the International Search Report

D1: US 4 976 582 A
D2: US 4 695 182 A
D3: EP 0 705 990 A2

Document D1 discloses a device for movement and positioning of an element in space. The device includes end of control arms integrated by ball-and-socket joints.

Document D2 discloses a ball and socket joint with mechanical interlock.

Document D3 discloses a spherical joint with a bushing between an inner- and outer member.

The invention according to claims 1-11 differs from what is known in D1, D2 and D3 by the housing in the joint socket having a grooved surface designed to increase friction on the abutting bearing. The teaching of the prior art as disclosed in the cited documents does not lead a skilled person to the invention. Therefore, the invention defined in the claims is not obvious to a person skilled in the art.

The invention according to claims 1-11 is thus novel and is considered to involve an inventive step. The invention also has industrial applicability.

PATENT COOPERATION TREATY

PCT

INTERNATIONAL SEARCH REPORT

(PCT Article 18 and Rules 43 and 44)

Applicant's or agent's file reference 103371901	FOR FURTHER ACTION <small>see Notification of Transmittal of International Search Report (Form PCT/ISA/220) as well as, where applicable, item 5 below.</small>	
International application No. PCT/SE 99/02255	International filing date (day/month/year) 2 December 1999	(Earliest) Priority Date (day/month/year) 3 December 1998
Applicant ABB AB et al		

This international search report has been prepared by this International Searching Authority and is transmitted to the applicant according to Article 18. A copy is being transmitted to the International Bureau.

This international search report consists of a total of 3 sheets.

☒ It is also accompanied by a copy of each prior art document cited in this report.

1. ☐ Certain claims were found unsearchable (See Box I).
2. ☐ Unity of invention is lacking (See Box II).
3. ☐ The international application contains disclosure of a nucleotide and/or amino acid sequence listing and the international search was carried out on the basis of the sequence listing
 - ☐ filed with the international application.
 - ☐ furnished by the applicant separately from the international application,
 - ☐ but not accompanied by a statement to the effect that it did not include matter going beyond the disclosure in the international application as filed.
 - ☐ transcribed by this Authority.
4. With regard to the title, ☒ the text is approved as submitted by the applicant.
 - ☐ the text has been established by this Authority to read as follows:
5. With regard to the abstract,
 - ☒ the text is approved as submitted by the applicant.
 - ☐ the text has been established, according to Rule 38.2(b), by this Authority as it appears in Box III. The applicant may, within one month from the date of mailing of this international search report, submit comments to this Authority.
6. The figure of the drawings to be published with the abstract is:
 - Figure No. 1 ☒ as suggested by the applicant. ☐ None of the figures.
 - ☐ because the applicant failed to suggest a figure.
 - ☐ because this figure better characterizes the invention.

Form PCT/ISA/210 (first sheet) (July 1992)

INTERNATIONAL SEARCH REPORT

International application No.

PCT/SE 99/02255

A. CLASSIFICATION OF SUBJECT MATTER

IPC7: B25J 17/02, F16C 11/06

According to International Patent Classification (IPC) or to both national classification and IPC

B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)

IPC7: B25J, F16C

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

SE,DK,FI,NO classes as above

Electronic data base consulted during the international search (name of data base and, where practicable, search terms used)

C. DOCUMENTS CONSIDERED TO BE RELEVANT

Category*	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim: No.
Y	US 4976582 A (CLAVEL), 11 December 1990 (11.12.90), figures --	1-12
Y	US 4695182 A (WOOD, JR.), 22 Sept 1987 (22.09.87), column 5, line 64 - column 6, line 3 --	1-12
Y	EP 0705990 A2 (THK CO. LTD.), 10 April 1996 (10.04.96), column 9, line 44 - line 55 --	1,3-4,9-11
A	US 3856423 A (UCHIDA), 24 December 1974 (24.12.74), column 3, line 66 - column 4, line 6; column 1, line 56 - line 57 --	1,5,7,11

☒ Further documents are listed in the continuation of Box C.☒ See patent family annex.

* Special categories of cited documents:

- "A" document defining the general state of the art which is not considered to be of particular relevance
- "B" earlier document but published on or after the international filing date
- "I" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
- "O" document referring to an oral disclosure, use, exhibition or other means
- "P" document published prior to the international filing date but later than the priority date claimed

"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention

"X" document of particular relevance: the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

"Y" document of particular relevance: the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art

"&" document member of the same patent family

Check-boxes reserved for designating States (for the purposes of a national patent) which have become party to the PCT after Issuance of this sheet:

- ☐
- ☐

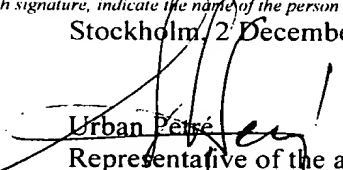

Precautionary Designation Statement: In addition to the designations made above, the applicant also makes under Rule 4.9(b) all other designations which would be permitted under the PCT except any designation(s) indicated in the Supplemental Box as being excluded from the scope of this statement. The applicant declares that those additional designations are subject to confirmation and that any designation which is not confirmed before the expiration of 15 months from the priority date is to be regarded as withdrawn by the applicant at the expiration of that time limit. (Confirmation of a designation consists of the filing of a notice specifying that designation and the payment of the designation and confirmation fees. Confirmation must reach the receiving Office within the 15-month time limit.)

Supplemental box*If the Supplemental Box is not used, this sheet should not be included in the Request.*

1. *If, in any of the Boxes, the space is insufficient to furnish all the information: in such case, write "Continuation of Box No. ..." (indicate the number of the Box) and furnish the information in the same manner as required according to the captions of the Box in which the space was insufficient, in particular.*
 - (i) *If more than two persons are involved as applicants and/or inventors and no "continuation sheet" is available: in such case, write "Continuation of Box No. III" and indicate for each additional person the same type of information as required in Box No. III. The country of the address indicated in this Box is the applicant's State (that is country) of residence if no State of residence is indicated below:*
 - (ii) *If, in Box No. II or in any of the sub-boxes of Box No. III, the indication "the States indicated in the Supplemental Box" is checked: in such case, write "Continuation of Box No. II" or "Continuation of Box No. III" or "Continuation of Boxes No. II and No. III" (as the case may be), indicate the name of the applicant(s) involved and, next to (each) such name, the State(s) (and/or, where applicable, ARIPO, Eurasian, European or OAPI patent) for the purposes of which the named person is applicant:*
 - (iii) *If, in Box No. II or in any of the sub-boxes of Box No. III, the inventor or the inventor/applicant is not inventor for the purposes of all designated States or for the purposes of the United States of America: in such case, write "Continuation of Box No. II" or "Continuation of Box No. III" or "Continuation of Boxes No. II and No. III" (as the case may be), indicated the name of the inventor(s) and, next to (each) such name, the State(s) (and/or, where applicable, ARIPO, Eurasian, European or OAPI patent) for the purposes of which the named person is inventor:*
 - (iv) *If, in addition to the agent(s) indicated in Box No. IV, there are further agents: in such case, write "Continuation of Box No. IV" and indicate for each further agent the same type of information as required in Box No. IV;*
 - (v) *If, in Box No. V, the name of any State (or OAPI) is accompanied by the indication "patent addition" or "certificate of addition" or if, in Box No. V, the name of the United States of America is accompanied by an indication "continuation" or "continuation-in-part": in such case, write "Continuation of Box No. V" and the name of each State involved (or OAPI), and after the name of each such State (or OAPI), the number of the parent title or parent application and the date of grant of the parent title or filing of the parent application:*
 - (vi) *If, in Box No. VI, there are more than three earlier applications whose priority is claimed: in such case, write "Continuation of Box No. VI" and indicated for each additional earlier application the same type of information as required in Box No. VI:*
 - (vii) *If, in Box No. VI, the earlier application is an ARIPO application: in such case, write "Continuation of Box No. VI", specify the number of the item corresponding to that earlier application and indicate at least one country party to the Paris Convention for the Protection of Industrial Property for which that earlier application was filed.*
2. *If, with regard to the precautionary designation statement contained in Box No. V, the applicant wishes to exclude any State(s) from the scope of that statement: in such case, write "Designation(s) excluded from precautionary designation statement" and indicate the name or two-letter code of each State so excluded.*
3. *If the applicant claims, in respect of any designated Office, the benefits of provisions of the national law concerning non-prejudicial disclosures of exceptions to lack of novelty: in such case, write "Statement concerning non-prejudicial disclosures or exceptions to lack of novelty" and furnish that statement below.*

ROBOT DEVICE

10 TEKNISKT OMRÅDE

Föreliggande uppfinning hänför sig till en anordning, användning och ett förfarande för att i en treaxlig led i en robot eliminera risken för glapp.

15

TEKNIKENS STÅNDPUNKT

Vid deltarobotar sker en positionering av ett rörligt element i förhållande till ett fast element (fig 5). Tre drivanordningar driver varsin länkanordning anordnad mellan det fasta och det rörliga elementet. Länkanordningarna kan innefatta stag anordnade i flerledssystem, där lederna kan utgöras av kula-skål-leder.

20

I den amerikanska patentskriften US,A, 4 976 582 visas bland annat en deltarobot med två parallella länkar 5a och 5b ledat förbundna med kula-skål-leder 26a, 26b, 27a och 27b (fig 5). Ledskålarna är fästade i ändarna på länkarna.

25

Kula-skål-lederna enligt uppfinningen är utformade med utbytbara lager som minimerar friktionen i leden. Lagret har en skålformad inneryta och är tillverkat av självsmörjande polymermaterial. Lagret är anordnat i ett säte i ledskålen. Under drift av roboten sker dels ledrörelser i kula-skål-lederna och dels rotationsrörelser.

30

Problem uppstår när lagret följer med rotationsrörelsen dvs följer med ledkulans rotationsrörelse. Härvid sker ledrörelserna vid samma radier hos ledskålen vid varje slag hos länkanordningen, varvid nötning sker upprepade gånger på samma ställen. Ett ojämnt slitage uppstår i leden, vilket förorsakar glapp i leden och därmed ökad friktion i leden. Orsaken till att lagret roterar med ledkulan är att materialet i lagret är för mjukt för att en bra presspassning i sätet ska kunna säkras.

35

En robot som innefattar led / leder med glapp klarar inte en jämn gång utan störs i sin rörelse eftersom lederna kärvar och rörelserna blir oprecisa. Momentjämvikten i konstruktionen störs, vilket sänker robotens livslängd drastiskt. Slagtiderna förlängs och roboten klarar inte prestandakraven.

40

Vid drift av deltarobotar uppkommer därmed behovet av att fixera ett lager i ett säte i ledskålen. Detta behov kan inte deltaroboten i den amerikanska patentskriften uppfylla.

45

REDOGÖRELSE FÖR UPPFINNINGEN

- 5 Vid konstruktion av deltaroboter är syftet enligt uppfinningen att åstadkomma konstruktioner med låg vikt vilka klarar slagtider på 0.5 sekunder. För att uppnå så snabba robotar måste lederna utformas så att friktionen är minimerad.

- 10 Ett visst slitage av ett lager i en led är ofrånkomligt. Ett jämnt slitage av ett självsmörjande lager ger en jämn smörjning av och en jämn rörelse i leden. Vid ett jämnt slitage uppstår inga oönskade glapp och roboten får en jämn och snabb gång.

- 15 Syftet med föreliggande uppfinning är således att åstadkomma en robot innefattande en anordning med vilken man ökar friktionen mellan lager och ledskål i en kula-skål-led. Ett ytterligare syfte med uppfinningen är utforma anordningen så att den möjliggör ett enkelt byte av lager efter behov.

FIGURBESKRIVNING

- 20 Uppfinningen kommer att förklaras närmare genom beskrivning av ett utföringsexempel under hänvisning till bifogade ritning, där

fig 1 visar en ledskål enligt uppfinningen,

- 25 fig 2 visar en ledskål enligt uppfinningen,

fig 3 visar en ledskål enligt uppfinningen anordnad med rillor,

- 30 fig 4 visar en alternativ utformning med skålformat säte och lager,

fig 5 visar en deltarobot.

BESKRIVNING AV UTFÖRINGSEXEMPEL

- 35 En treaxlig kula-skål-led i en robot (fig 5) utgörs av en ledskål och en ledkula. Ledskålen (1) omsluter ledkulan (inte visad) med ett utrymme som utgör en halv sfär eller mindre (fig 1). I ledskålen (1) är ett säte (2) utformat för att hysa ett lager (3). Bestämningen lager avser här endera en lagerring, flera lagerringar eller lagret uppdelat i
- 40 sektioner på något för behovet lämpligtvis. I det här nedan beskrivna utföringsexemplet utgörs lagret av en lagerring.

- 45 Sätet (2) innefattar en yta (4) mot vilken lagerringen (3) presspassas (fig 2). Lagerringen (3) är tillverkad av ett polymermaterial och presspassas på plats med hjälp av verktyg på sedvanligt sätt. För att öka friktionen mellan ledskålens yta (4) och lagerringen (3) anordnas friktionshöjande organ (5) på ytan (4). De friktionshöjande organen kan utformas såsom exempelvis en vågstruktur i form av rillor (5') (fig 3). Rillorna (5') riktning i längsled bildar vinkeln (α) med lagerringens centrumaxel (A). Rillorna (5') är företrädesvis parallella med centrumaxeln (A). Rillorna bör dessutom ha spetsiga toppar för att säkerställa friktionen. När

lagerringen (3) anordnas i sätet (2) åstadkommer de friktionshöjande organen (5) en plastisk deformation av lagerringen (3) genom att tränga in i dennas material.

5 En alternativ utformning av uppfinningen är att göra lagrets mantelyta kompatibel mot de friktionshöjande organen (5) anordnade på ledskålens yta (4). I den ovan beskrivna utföringsformen med friktionshöjande organ (5) i form av rillor (5') kan lagret (3) därmed alternativt utformas med till sätets yta kompatibla rillor.

10 En ytterligare alternativ utformning av uppfinningen är att utforma ledskålens säte skålformat och försett med rillor. Lagret utformas då med en skålformad ytteryta och placeras utan presspassning i ledskålens säte. I den här utformningen av uppfinningen är det den fjäderkraft som håller ihop kula-skål-leden som även fixerar lagret.

PATENTKRAV

- 1 Robot innefattande minst en länkanordning i vilken stag är anordnade i
5 flerledssystem där lederna innefattar treaxliga kula-skål-leder
k ä n n e t e c k n a d a v att ett lager (3) är fixerat mot rotation i ett säte (2) i
en leds ledskål (1), vilket säte (2) innefattar en yta (4) mot vilken lagret (3)
anligger och att ytan (4) är utformad med friktionshöjande organ (5).
- 10 2 Anordning enligt patentkrav 1 k ä n n e t e c k n a d a v att lagret (3) utgörs av
en lagerring (3').
- 15 3 Anordning enligt patentkrav 1-2 k ä n n e t e c k n a d a v att de
friktionshöjande organen (5) genom en plastisk deformation av lagret (3)
intränger i dennas material.
- 20 4 Anordning enligt patentkrav 1-3 k ä n n e t e c k n a d a v att de
friktionshöjande organen (5) är utformade i form av rillor (5').
- 5 Anordning enligt något av patentkraven 1-4 k ä n n e t e c k n a d a v att lagret
25 (3) anligger med presspassning mot ytan (4).
- 6 Anordning enligt patentkrav 4 k ä n n e t e c k n a d a v att rillorna (5') är
30 riktade huvudsakligen parallellt med lagrets centrumaxel (A).
- 7 Anordning enligt patentkraven 1-6 k ä n n e t e c k n a d a v att lagret är
tillverkad av ett polymermaterial.
- 35 8 Anordning enligt något av patentkraven 1-7 k ä n n e t e c k n a d a v att
roboten är en deltarobot.
- 40 9 Förfarande för att i en robot innefattande minst en länkanordning i vilken stag är
anordnade i flerledssystem, vilka leder innefattar treaxliga kula-skål-leder och
där en leds ledskål (1) bringas att innefatta ett säte (2) för att mottaga ett lager
45 (3), vilket säte (2) bibringas en yta (4) mot vilken lagret anligger
k ä n n e t e c k n a t a v att lagret (3) fixeras mot rotation i sätet (2) genom att
ytan (3) förses med friktionshöjande organ (5) vilka bringas i grepp med lagret
(3) när lagret (3) inpassas på plats.

10 Förfarande enligt patentkrav 9 k ä n n e t e c k n a t a v att lagret (3)
presspassas på plats i ledskålens (1) säte (2).

1. ☒ The applicant is hereby notified that the international search report has been established and is transmitted herewith.
Filing of amendments and statement under Article 19:
The applicant is entitled, if he so wishes, to amend the claims of the international application (see Rule 46):
When? The time limit for filing such amendments is normally 2 months from the date of transmittal of the international search report; however, for more details, see the notes on the accompanying sheet.
Where? To the International Bureau of WIPO
34, chemin des Colombettes
1211 Geneva 20, Switzerland
Facsimile No.: (41-22) 740.14.35
For more detailed instructions, see notes on the accompanying sheet.
2. ☐ The applicant is hereby notified that no international search report will be established and that the declaration under Article 17(2)(a) to that effect is transmitted herewith.
3. ☐ With regard to the protest against payment of (an) additional fee(s) under Rule 40.2, the applicant is notified that:
☐ the protest together with the decision thereon has been transmitted to the International Bureau together with the applicant's request to forward the texts of both the protest and the decision thereon to the designated Offices.
☐ no decision has been made yet on the protest: the applicant will be notified as soon as a decision is made.
- 4 Further action(s): The applicant is reminded of the following:
Shortly after 18 months from the priority date, the international application will be published by the International Bureau. If the applicant wishes to avoid or postpone publication, a notice of withdrawal of the international application, or of the priority claim, must reach the International Bureau as provided in Rules 90bis.1 and 90bis.3, respectively, before the completion of the technical preparations for international publication.
Within 19 months from the priority date, a demand for international preliminary examination must be filed if the applicant wishes to postpone the entry into the national phase until 30 months from the priority date (in some Offices even later).
Within 20 months from the priority date, the applicant must perform the prescribed acts for entry into the national phase before all designated Offices which have not been elected within 19 months from the priority date or could not be elected because they are not bound by Chapter II.

(54) Title: **ROBOT DEVICE**

(57) Abstract

Device for fixing a bearing means firmly in a three-axle ball and socket joint arranged in a robot. The bearing means is arranged in a housing (2) on the joint socket (1) and the housing (2) includes surface (4) against which the bearing means abuts. Surface (4) is designed with friction-increasing means (5) that grip the bearing means and hold it.

PCT/SE99/02255ROBOT DEVICE

5 TECHNICAL FIELD

The present invention relates to a device, use and method to eliminate the risk of play in a three-axle joint in a robot.

10 PRIOR ART

In a delta robot, a positioning of a moveable element in relation to a fixed element takes place (Fig. 5). Three driving means each drive their own link device arranged between the fixed and the moveable elements. The link devices can include rods arranged in multi-joint systems where the joints can comprise ball and socket joints.

The American document US,A, 4 976 582 shows, among other things, a delta robot with two parallel links 5a and 5b joined to pivot with ball and socket joints 26a, 26b, 27a, and 27b (Fig. 5). The joint sockets are attached to the ends of the links.

20

The ball and socket joints according to the invention are designed with replaceable bearing means that minimise friction in the joints. The bearing means has a socket-shaped inner surface and is manufactured in self-lubricating polymer material. The bearing means is arranged in a seat in the joint socket. During the operation of the robot, rotational movements take place in the ball and socket joints and directional movements also occur.

25

Problems arise when the bearing means follows the rotational movement, i.e. follows the rotation movement of the ball of the joint. In this situation, link movements take place at the same radii take place at the joint socket at each stroke of the linkage device, whereby wear occurs repeatedly at the same location. An uneven wear occurs in the joint, which causes play in the joint and thus increased friction in the joint. The reason that the bearing

30

WO 00/32363

2

PCT/SE99/02255

means rotates with the ball joint is that the material in the bearing means is too soft to ensure a good tight fit in the seat.

5 A robot including a joint / joints with play does not work at a smooth pace but is disturbed in its movement as the joints bind and the movements become imprecise. The balance of moments in the construction is disturbed, which drastically reduces the working life of the robot. The cycle time increases and the robot cannot meet its performance requirements.

10 In the operation of robots, the need thus arises to firmly fix a bearing means in a seat in a joint socket. This need cannot be met by the delta robot in the American document.

SUMMARY OF THE INVENTION

15 When designing delta robots, the objective according to the invention is to achieve a design with a low weight that can handle a stroke time of 0.5 seconds. To achieve robots that are this fast, the joint must be designed so that friction is minimised.

20 A certain wear on the bearing means in a joint is unavoidable. An even wear of a self-lubricating bearing means gives an even lubrication of and a smooth movement in the joint. When the wear is even, no unwanted play occurs and the robot has a smooth, rapid operation.

25 The object of the present invention is thus to achieve a robot including a means with which one increases the friction between bearing means and socket in a ball and socket joint. An additional object of the invention is to design the device so that it allows an easy replacement of bearing means according to need.

DESCRIPTION OF THE DRAWING

30 The invention will be explained in greater detail by describing an example of an embodiment with reference to the enclosed drawings, where;

Fig. 1 shows a socket of a joint according to the invention.

Fig. 2 shows a joint socket according to the invention,

Fig. 3 shows a joint socket according to the invention arranged with grooves,

Fig. 4 shows an alternative design with a socket-shaped seat and bearing means,

Fig. 5 shows a delta robot.

DESCRIPTION OF EMBODIMENTS

A three axle ball and socket joint in a robot (Fig. 5) comprises a joint socket and a joint ball. The joint socket 1 encloses the ball of the joint (not shown) with a space that comprises approximately a half of a sphere or less (Fig. 1). A housing 2 shaped to accommodate a bearing means 3 is located within socket 1.

The word bearing here relates to either one annular bearing, several annular bearings or the bearing divided into sections in a way suitable for the purpose. In the embodiment described below, the bearing means comprises one annular bearing means.

The housing 2 includes a surface 4 against which the annular bearing means 3 is pressed to fit tightly (Fig. 2). Annular bearing means 3 is manufactured from a polymer material and is pressed to fit tightly in place with the aid of a tool in the traditional manner. To increase the friction between surface 4 of the joint socket and the annular bearing means 3, friction-increasing means 5 are arranged on the surface 4. The friction-increasing means can be designed as, for example, a wave structure in the form of grooves 5' (Fig. 3). The orientation of the grooves 5' in a longitudinal direction forms the angle (α) with the centre axis (A) of the annular bearing means. Grooves 5' are preferably parallel with the centre axis (A). In addition, the grooves should have sharply pointed tops to secure the friction. When the annular bearing means 3 is arranged in the housing 2, the friction-increasing

means 5 achieve a permanent deformation of the annular bearing means 3 by penetrating its material.

- An alternative design of the invention is to make the envelope surface of the bearing means compatible to the friction-increasing means 5 arranged on the surface of the joint socket 4. In the embodiment described above with the friction-increasing means 5 in the form of grooves 5', the bearing means 3 can thus be alternatively designed with grooves that are compatible with the surface of the housing.
- 10 A further alternative design of the invention is to design the housing of the joint socket socket-shaped and provided with grooves. Then the bearing means is designed with a socket-shaped outer surface and is placed without being pressed to fit tightly in the housing of the joint socket. In this design of the invention, it is the spring force that holds the ball and socket joint together that also fixes the bearing means firmly in place.

CLAIMS

1. Robot including at least one linkage device in which pull rods are arranged in a multi-joint system where the joints include three-axle ball and socket joints
characterised in that a bearing means (3) is fixed so that it does not rotate in a
5 housing (2) in the socket of a joint (1), where housing (2) includes a surface (4) against
which the bearing means (3) abuts and that the surface (4) is designed with friction-
increasing means (5).
- 10 2. Device according to claim 1 characterised in that the bearing means (3)
comprises an annular bearing means (3').
3. Device according to claims 1-2 characterised in that the friction-increasing
means (5) penetrate its material by a permanent deformation of the bearing means (3).
- 15 4. Device according to claims 1-3 characterised in that the friction-increasing
means (5) are designed in the form of grooves (5').
5. Device according to claims 1-4 characterised in that bearing means (3) abuts
with surface (4) and is pressed to fit tightly.
20
6. Device according to claim 4 characterised in that grooves (5') are oriented
primarily parallel with the central axis (A) of the bearing means.
7. Device according to claims 1-6 characterised in that the bearing means is made
25 of a polymer material.
8. Device according to any of claims 1-7 characterised in that the robot is a delta
robot.
- 30 9. Method for a robot including at least one linkage device in which pull rods are arranged
in a multi-joint system where the joints include three-axle ball and socket joints and
where a socket (1) of a joint is provided with a housing (2) to accommodate a bearing

means (3), where the housing (2) is provided with a surface (4) against which the bearing means abuts characterised in that bearing means (3) is fixed so that it does not rotate in housing (2) by providing surface (4) with friction-increasing means (5) that are brought to engage with bearing means (3) when bearing means (3) is positioned in place.

10. Method according to claim 9 characterised in that the bearing means (3) is pressed to fit tightly in place in the housing (2) of the joint socket (1).

10 11. Method according to claim 9 characterised in that friction-increasing means (5) deform the material of the bearing means by permanent deformation when bearing means (3) is placed in position.

15 *utgå* ~~12. Use of a device according to claim 1 and a method according to claim 9 for fixing the location of a bearing means in a robot including at least one linkage device in which rods are arranged in a multi-joint system where the joints include three-axle ball and socket joints.~~

* Special categories of cited documents

"A" document defining the general state of the art which is not considered to be of particular relevance

"B" earlier document but published on or after the international filing date

"C" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)

"D" document referring to an oral disclosure, use, exhibition or other means

"P" document published prior to the international filing date but later than the priority date claimed

"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention

"X" document of particular relevance: the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

"Y" document of particular relevance: the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art

"&" document member of the same patent family
